## i-CUT380T/Ti/Tec/420T

The Best Productivity Popular 10 inch Vertical Tapping Center

### Rapid Travel Improvement

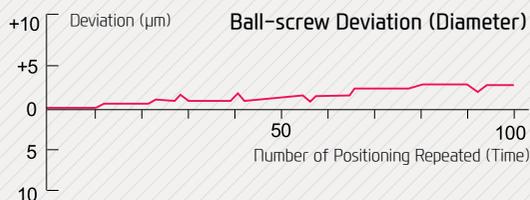

Rapid travel has increased to **56** m/min significantly reducing production times

### LM Guideway

Rapid High Speed axis movement is achieved by the use of linear motion guide ways This reduces non-cutting time and decreases machining time for greater productivity

### Ball Screw

All axis are driven by high precision double-nut ballscrews. The double pretension design provides outstanding positioning and repeatability with virtually no thermal growth. All ballscrews are connected directly to the servo drive motors without gears or belts, to eliminate backlash.

01

### Spindle

Spindle diameter more greatly increases rigidity to the thickness of the spindle. The adoption of high-precision angular contact ball bearings to maintain rigidity and accuracy.

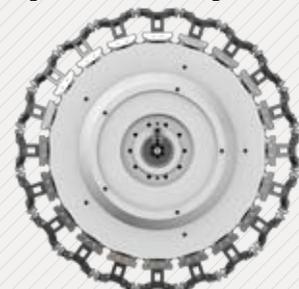

02

### ATC & Magazine

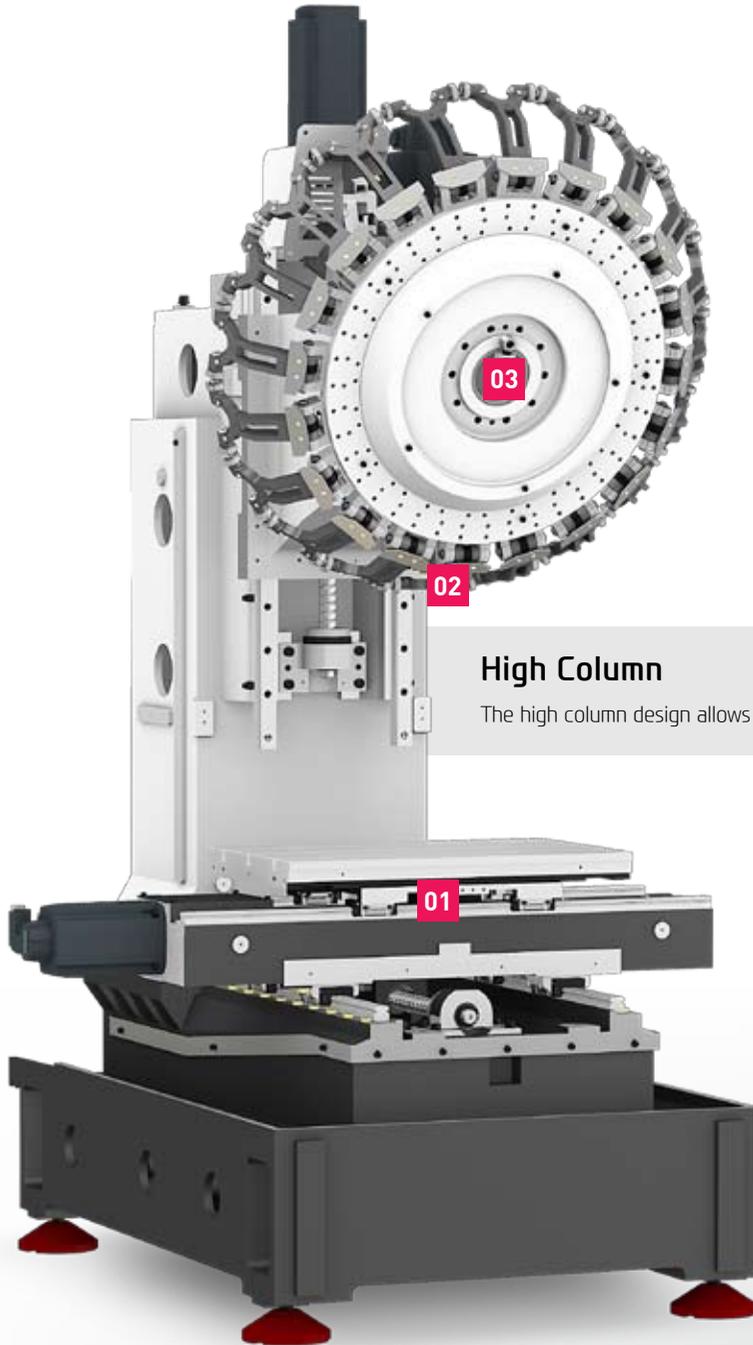

The 14 tool rotary ATC is standard on the i-CUT380T series. The double-arm ATC is offered as an option. The tool magazine has the option for twenty (20) tools or twenty four (24) tools.

## Dual Table Type Tapping Center

i-CUT380TD/TDi tool will satisfy customer's request on productivity maximization, in which Dual Table is applied to quick transfer speed and high speed spindle structure.

01

### Column Moving Type

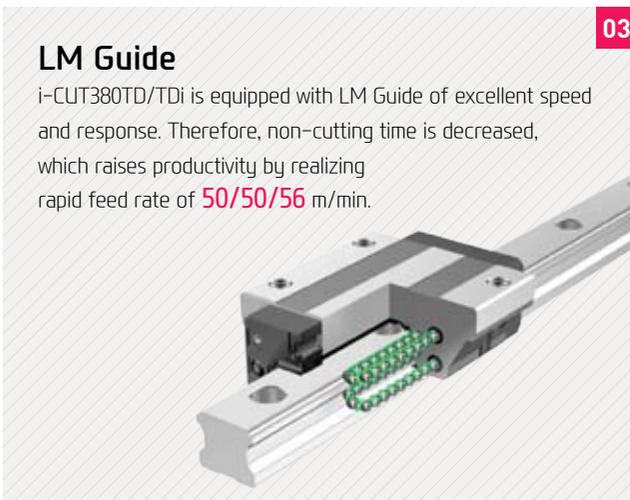

By using Dual Table, it is designed as column moving structure to be able to maximize productivity. Also, by extending column width, processing accuracy is increased and by designed as thermal symmetrical column structures, thermal deformation is minimized by heated.

02

### Dual Table

The automatic index table is incorporated into the standard design of the machine on the i-CUT 380TD and 420TD. Both sides are completely separated by a heavy-duty guard. Because the table remains stationary during cutting, work can be safely set up on the table side not being machined on. The table itself rotates 180 degrees via a hydraulic rack & pinion gear and is locked in position using a locating pin.

03

### LM Guide

i-CUT380TD/TDi is equipped with LM Guide of excellent speed and response. Therefore, non-cutting time is decreased, which raises productivity by realizing rapid feed rate of **50/50/56** m/min.

## High-Precision Spindle

Long Lasting High Accuracy & Excellent Performance  
Vertical Tapping Center

### Application of 2 Faces Spindle OPTION

The Big Plus spindle system (BBT #30) provides dual contact between the spindle face and the flange face of the tool holder. This greatly increase tool rigidity, reduces run out and adds significant productivity to your machining applications.

The increase in standard diameter improves stiffness and ATC repeatability, and Z-axis displacement prevention further extends tool life.

## Main Spindle

For high speed spindle, it is designed as high-precision rapid angular ball bearing. Therefore, it exerts excellent performance by realizing rapid processing of Max. 12,000 rpm.

Reverse rotation double speed reverse (Double Speed Return) has been reduced processing time.

## Rigid Tapping

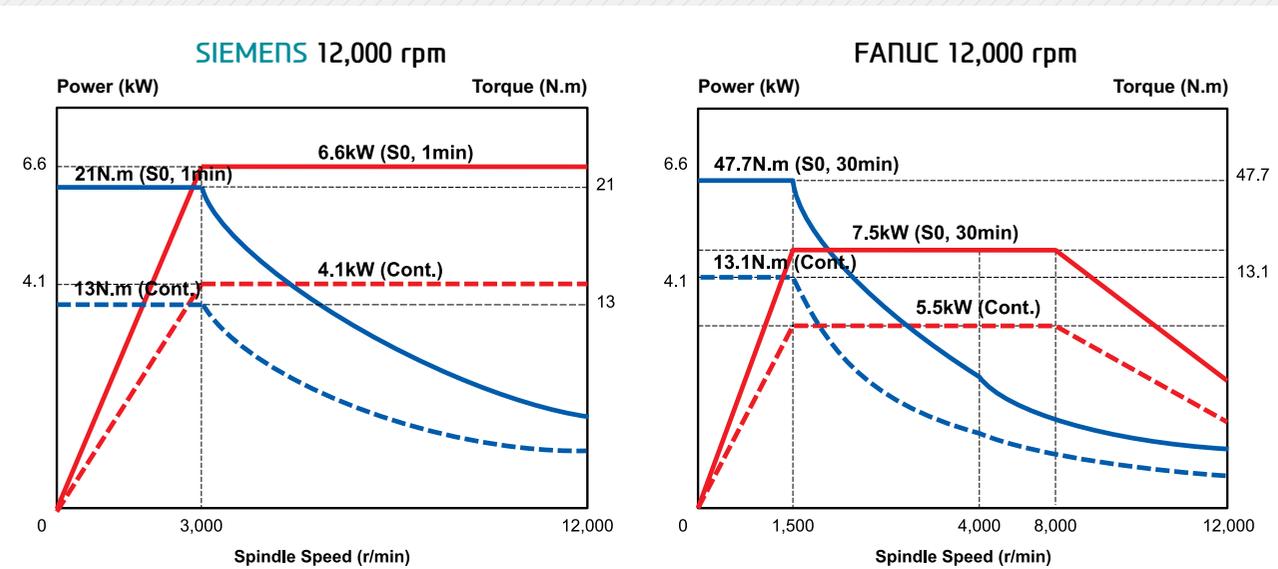

Rigid tapping is standard and eliminates the need for special tooling. Consistent and accurate tapping increases tap life and reduces the machining cycle time.

## Spindle Thru Coolant

Through the spindle coolant is available. This is particularly useful for deep hole drilling and helps increase tool life and decrease cycle time.
